# Features

## Multi L-J chart

This function uses L-J plot overlay for project, quality control, and instrument testing comparisons to help evaluate the consistency between different instruments in the same project.

## Westgard method decision chart

This function uses the Six Sigma management to provide the lab with suitable QC rules.

## Out-of-Control Statistics and Analysis

Built-in common out-of-control information to get rid of manual filling. Record the process of losing control and evaluate patient samples for later statistics, analysis, and improvement.

## Data Monitoring

This function can display real-time QC status of different departments such as in control, out of control, and warnings. Assist the laboratory in quickly identifying abnormal items for targeted handling.
